

# PLANET-3 FACT SHEET

## About Planet-3

- Planet-3 is a cannabis business consulting firm dedicated to uplifting the business practices of the Montana cannabis industry as a community.
- Planet-3 was created by a small group of people passionate about making positive changes to the cannabis industry. In August of 2018, our team began researching and developing sustainable hemp fiber innovations including hemp fiber grow media and hemp bioplastic products. Through reaching out to the local community to gain more insight for these projects, we saw the opportunity to do so much more than just R&D. There is so much knowledge and experience to share with each other, and Planet-3 is our ecosystem for Montana cannabis businesses to receive logistical support, share knowledge, and build community. Our services range from Extraction/Grow Facility Planning, Formulation, Compliance Documentation, Graphic Design, Web Design, and more. We provide updates on legislation and industry news that impact our community so we can all stay informed and engage in valuable discourse. Though still a very young company, we're so excited about the collaborative environment we're building to uplift everyone in the Montana cannabis community. Keep up with what we're up to on our socials and check out our website for resources, past projects, and services we provide.

## About Planet-3's Core Team

### **Taylor Ange**

*Co-Founder and Chief Executive Officer (CEO)*

#### **Specializations:**

Extraction Processes

Compliance

Product development

Taylor has maintained a passion for finding unconventional solutions for problems in the biology and medical fields. From a young age, he was heavily invested in the emergency medical industry as an active member of King County Search and Rescue in Washington State. Taylor attended college at the University of Montana as a terrestrial ecology major. As a field researcher and a lab technician with the US Forest Service, he conducted e-DNA testing on fluvial systems in Montana, Idaho, Washington, and Oregon. In the lab, he conducted mitochondrial DNA synthesis and analysis which taught him how a large scale science and research laboratory is laid out and operated, along with what control measures are used for both personal and product safety.

He has been involved in projects spanning beverage, cannabis fiber and extraction, and clean technology. He has been a part of developing various technologies including carbon dioxide reclamation equipment, hemp bioplastic formulations, and semi-autonomous control systems.

## **Tresha Sanders**

Co-Founder and Chief Marketing Technologist

Specializations:

Branding

Digital Marketing Strategies

Web development

Tresha has spent years in startup and small business environments under roles spanning administrative support, graphic design, web management, marketing, and technology. She began exploring her design skills as a librarian in Sidney, Montana. She attended the University of Montana and received a degree in Computer Science. While attending UM, Tresha worked at Blackstone LaunchPad, an organization that assists students and alumni with their entrepreneurial pursuits. She also spent time as the Project Manager for a software development team developing an online writing tool for a Montana entrepreneur. Working with startups and as part of a core team in startups for years has given her a full array of skills she can bring to any new project she takes on.

She has assisted in the development of multiple strategies for brands including carbon dioxide reclamation equipment for breweries, hemp bioplastic products, and even an adult card game.
